Max Planck Institute for Mathematics in the Sciences, Leipzig, Germany

This document is an unofficial L^AT_EX template to be used to create a suitably formatted submission for the Journal of Vision. It considers the changed layout requirements as of 2010. The complete instructions for manuscript preparation are available at <http://www.journalofvision.org/site/misc/ifora.xhtml>. This is the text of the abstract. This version of the template is dated November 26, 2010. The template makes your L^AT_EX manuscript look similar to Journal of Vision articles. However, in contrast to the two-column JOV articles, manuscripts are in single column mode.

Keywords: reverse correlation, triggered correlation, primate, recursive least squares, linear-nonlinear model, system identification

Introduction

The `joy` class provides the following commands:

- `\title`
- `\abstract`
- `\author`
- `\keywords`

To specify authors, use the `\author` command for each author in the same order as they are to appear on the manuscript. The `\author` command requires six arguments: Name, first name(s), institution, address, ehomepage, and email.

After specifying the commands above make use of `\maketitle` to generate the title of the manuscript.

To create a new manuscript

To create a new manuscript for *Journal of Vision*, do the following:

1. Open this template in your favorite L^AT_EX editor.
2. Save the file under a new name.
3. Enter content into the appropriate sections, and make use of the standard L^AT_EX commands.

Including references

Treatment of cited material closely follows the Publication Manual of the American Psychological Association. The BibT_EX file `jovcite.bst` is a modified version of `apacite.bst`. References can be included in the same way as required for `apacite.bst`:

- `\citeA{AndrewsPollen1979}` → [Andrews and Pollen \(1979\)](#)
- `\cite{RoordaWilliams2002}` → [\(Roorda & Williams, 2002\)](#)
- `\citeNP{AndrewsPollen1979}` → [Andrews & Pollen, 1979](#)

The following BibT_EX tags have been added to `apacite.bst`: `doi`, `pubmedurl`, and `articleurl`. See `jovtemplate_latex.bib` for an example how to use a JOV bib file.

Figures

Add figures as usual in L^AT_EX. Figure 1 shows an example how to insert a figure stored in a pdf file.

Insert your figure here, for instance like this:

```
\includegraphics[width=\columnwidth]{file.pdf}
```

Figure 1: Example how to add a figure stored in a pdf file

If you are using `pdflatex`, the following file types are processed by `\includegraphics`: `pdf`, `png`, and `jpg`.

Disclaimer

Feel free to use this template on your own risk. Note that it is *not* an official template and that it may contain errors or deviations from Journal of Vision's requirements. If you find errors or if you have suggestions for improvements, please contact me.
